MVO Weekly Report for the Period 14 to 21 August 2015

Activity at the Soufrière Hills Volcano remains low.

The seismic network recorded two rockfalls and two volcano-tectonic earthquakes this week.

Sulphur-dioxide measurements for this week and for last week are not available because of equipment problems.

Pyroclastic flows can occur at any time without warning on any side of the volcano, including Gages from where they can travel rapidly into Plymouth. Tracks across the Belham valley are frequently destroyed or heavily modified by flash flooding or lahars, and caution should be exercised crossing the valley during and after rainfall. It is very likely that there will be lahars if Hurricane Danny affects Montserrat.

The Hazard Level is 1. There is no public access to Zone V, including Plymouth. Maritime Zones E and W are daytime transit only between sunrise and sunset (boats may sail through the zone but must not stop). Anyone who ignores these restrictions is liable to be prosecuted.

This report along with additional information on the Soufrière Hills Volcano and the Hazard Level System can be found at the MVO website: www.mvo.ms.

Roderick Stewart
Director

Seismic Activity (number of events)

	This week	Last week	Last 4 weeks (weekly average)
Rockfalls	2	0	0
VT earthquakes	2	4	5
Hybrid earthquakes	0	0	0
LP earthquakes	0	0	0

Sulphur Dioxide Flux (tonnes per day)

	This week	Last week	Last 4 weeks
Average	n/a	n/a	318
Maximum	n/a	n/a	497
Minimum	n/a	n/a	147

Note : The numbers provided in the tables above are provisional and may be subject to change after further analysis of the data.
