MVO Weekly Report for the Period 27 November to 4 December 2015

Activity at the Soufrière Hills Volcano remains low.

The seismic network recorded no volcano-seismic earthquakes or rockfalls this week.

Sulphur-dioxide measurements were not possible during the reporting period. The gas plume was blown towards inhabited areas at times during the week and the smell of volcanic gases was noticeable.

Pyroclastic flows can occur at any time without warning on any side of the volcano, including Gages from where they can travel rapidly into Plymouth. Tracks across the Belham valley are frequently destroyed or heavily modified by flash flooding or lahars, and caution should be exercised crossing the valley during and after rainfall.

The Hazard Level is 1. There is no public access to Zone V, including Plymouth. Maritime Zones E and W are daytime transit only between sunrise and sunset (boats may sail through the zone but must not stop). Anyone who ignores these restrictions is liable to be prosecuted.

This report along with additional information on the Soufrière Hills Volcano and the Hazard Level System can be found at the MVO website: www.mvo.ms.

Roderick Stewart
Director

Seismic Activity (number of events)

	This week	Last week	Last 4 weeks (weekly average)
Rockfalls	0	0	0
VT earthquakes	0	16	5
Hybrid earthquakes	0	0	0
LP earthquakes	0	0	0

Sulphur Dioxide Flux (tonnes per day)

	This week	Last week	Last 4 weeks
Average	n/a	n/a	n/a
Maximum	n/a	n/a	n/a
Minimum	n/a	n/a	n/a

Note : The numbers provided in the tables above are provisional and may be subject to change after further analysis of the data.
