MVO Weekly Report for the Period 10 to 17 November 2017

Activity at the Soufrière Hills Volcano remains low.

The seismic network recorded no volcanic earthquakes this week.

Measurements of the SO₂ flux were made using the helicopter on 9 and 14 November. The average SO₂ flux was 169 and 190 tonnes per day, respectively.

The smell of volcanic gases has been very noticeable at times during the week due to light winds blowing the plume over inhabited areas.

Pyroclastic flows can occur at any time without warning on any side of the volcano, including Gages from where they can travel rapidly into Plymouth. Tracks across the Belham Valley can be destroyed or heavily modified by flash flooding or lahars, and caution should be exercised crossing the valley during and after rainfall.

The Hazard Level is 1. There is no public access to Zone V, including Plymouth. Maritime Zones E and W are daytime transit only between sunrise and sunset (boats may sail through the zone but must not stop). Anyone who ignores these restrictions is liable to be prosecuted.

This report along with additional information on the Soufrière Hills Volcano and the Hazard Level System can be found at the MVO website: www.mvo.ms. Old weekly reports can be downloaded from http://www.mvo.ms/pub/Activity_Reports/. You can also follow @mvoms on both Facebook and Twitter.

Director

Seismic Activity (number of events)

| | This week | Last week | Last 4 weeks (weekly average) |
|--------------------|-----------|-----------|----------------------------------|
| Rockfalls | 0 | 1 | 2 |
| VT earthquakes | 0 | 1 | 2 |
| Hybrid earthquakes | 0 | 0 | 0 |
| LP earthquakes | 0 | 0 | 0 |

Sulphur Dioxide Flux (tonnes per day)

| | This week | Last week | Last 4 weeks |
|---------|-----------|-----------|--------------|
| Average | n/a | n/a | n/a |
| Maximum | n/a | n/a | n/a |
| Minimum | n/a | n/a | n/a |

Note : The numbers provided in the tables above are provisional and may be subject to change after further analysis of the data.
