## MVO Weekly Report for the Period 9 to 16 November 2018

Activity at the Soufrière Hills Volcano remains low.

The seismic network recorded two rockfalls and 16 volcano-tectonic earthquakes this week. 14 of the VT earthquakes occurred in a very brief swarm in the morning of 13 November.

Measurements of the SO<sub>2</sub> flux were taken from the helicopter on 9 November. There were eight traverses with an average flux of 209 tonnes per day.

Pyroclastic flows can occur at any time without warning on any side of the volcano, including Gages from where they can travel rapidly into Plymouth. Tracks across the Belham Valley can be destroyed or heavily modified by flash flooding or lahars, and caution should be exercised crossing the valley during and after rainfall.

The Hazard Level is 1. There is no public access to Zone V, including Plymouth. Maritime Zones E and W are daytime transit only between sunrise and sunset (boats may sail through the zone but must not stop). Anyone who ignores these restrictions is liable to be prosecuted.

This report along with additional information on the Soufrière Hills Volcano and the Hazard Level System can be found at the MVO website: [www.mvo.ms](http://www.mvo.ms). Old weekly reports can be downloaded from [http://www.mvo.ms/pub/Activity\\_Reports/](http://www.mvo.ms/pub/Activity_Reports/). You can also follow @mvoms on both Facebook and Twitter.

**Monitoring Data Summary**

**Seismic Activity (number of events)**

	This week	Last week	Last 4 weeks (weekly average)
Rockfalls	2	0	1
VT earthquakes	16	1	4
Hybrid earthquakes	0	0	0
LP earthquakes	0	0	0

**Sulphur Dioxide Flux (tonnes per day)**

	This week	Last week	Last 4 weeks
Average	n/a	n/a	n/a
Maximum	n/a	n/a	n/a
Minimum	n/a	n/a	n/a

*Note : The numbers provided in the tables above are provisional and may be subject to change after further analysis of the data.*
